## **Materials Management with SAP S/4HANA**

Organizations are ethically, morally, and legally required to maintain safe

workplaces that protects employees, visitors and anyone who frequents their establishments. But why do organizations that employ uniformed security personnel as part of their overall workplace violence prevention program still struggle to create and maintain the safest possible workplaces? To meet these obligations organizations often employ uniformed security officers to deter, observe, and report criminal behavior, and in some contexts, they physically interact with dangerous individuals to protect employees, consumers and visitors from violent behaviors. Unfortunately, many organizations don't utilize their security personnel to their fullest potential and organizational and community members continue to be victims of workplace violence. This book identifies the flawed principles, policies and personnel decisions that organizations use, and it provides practical solutions to address them. The book covers two major themes: the misapplication of law enforcement community safety principles to private, free-market businesses and the use of risk aversive philosophies to their security officer's activities. This book covers the principles, policies and personnel necessary for maximizing the effectiveness of uniformed security personnel to successfully mitigate potential workplace violence and create and maintain safe organizations. There is a strong need for this book since workplace violence prevention has taken on a new focus due to increases in workplace violence incidents and new laws requiring organizations to take a more serious approach to workplace violence prevention. The healthcare and campus markets are most affected by these laws and are under public scrutiny because of their vulnerable populations. These two markets combined employ the most non-contract, propriety private security personnel in the country. Both markets rely on uniform security officers to create and maintain safe communities and play an important role in their respective workplace violence prevention plans.

## Cloud Foundry: The Definitive Guide

Over the last few years, financial statement scandals, cases of fraud and corruption, data protection violations, and other legal violations have led to numerous liability cases, damages claims, and losses of reputation. As a reaction to these developments, several regulations have been issued: Corporate Governance, the Sarbanes-Oxley Act, IFRS, Basel II and III, Solvency II and BilMoG, to name just a few. In this book, compliance is understood as the process, mapped not only in an internal control system, that is intended to guarantee conformity with legal requirements but also with internal policies and enterprise objectives (in particular, efficiency and profitability). The current literature primarily confines itself to mapping controls in SAP ERP and auditing SAP systems. Maxim Chuprunov not only addresses this subject but extends the aim of internal controls from legal compliance to include efficiency and profitability and then well beyond, because a basic understanding of the processes involved in IT-supported compliance

management processes are not delivered along with the software. Starting with the requirements for compliance (Part I), he not only answers compliance-relevant questions in the form of an audit guide for an SAP ERP system and in the form of risks and control descriptions (Part II), but also shows how to automate the compliance management process based on SAP GRC (Part III). He thus addresses the current need for solutions for implementing an integrated GRC system in an organization, especially focusing on the continuous control monitoring topics. Maxim Chuprunov mainly targets compliance experts, auditors, SAP project managers and consultants responsible for GRC products as readers for his book. They will find indispensable information for their daily work from the first to the last page. In addition, MBA, management information system students as well as senior managers like CIOs and CFOs will find a wealth of valuable information on compliance in the SAP ERP environment, on GRC in general and its implementation in particular.
