I am pleased to present a work which marks a milestone in the history of public works and, more precisely, in that of permanent structures—a comprehensive dictionary of Civil Engineering terms. Since the beginning of time, Man has always tried to find a means to clear the obstacles which nature erected to displace him. With the first tree trunk thrown across a river, man sought to improve the crossing structure. After the invention of the wheel, and to satisfy his thirst for conquest (Roman ways), and comfort (aqueducts), man built bridges that became a preremptory necessity to move quickly. Thus, Man started to build wooden and masonry works. With the passing centuries, the builders became masters in the art of building masonry works. Then came the Industrial Revolution and the advent of the steel (1864), which was closely followed by the

invention of the reinforced concrete (1855). The need for railways and improving the road network inspired great works of crossing such as viaducts and tunnels. The boom of the railway network and the development of the car required the construction of an increasing number of new structures. This phenomenon continues today with hundreds of structures built each year throughout the world.

Handmade soap is made extra-special with the addition of milk! Soaps enriched with milk are creamier than those made with water, and milk's natural oils provide skin-renewing moisture and nourishment. In Milk Soaps, expert soapmaker Anne-Marie Faiola demystifies the process with step-by-step techniques and 35 recipes for making soaps that are both beautiful and useful. She explains the keys to success in using a wide range of milk types, including cow, goat, and even camel milk, along with nut and grain milks such as almond, coconut, hemp, rice, and more. Photographs show soapmakers of all levels how to achieve a variety of distinctive color and shape effects, including funnels, swirls, layers, and insets. For beginners and experts alike, this focused guide to making milk-enriched soaps offers an opportunity to expand their soapmaking skills in new and exciting ways.

Machine Learning in Action

This guide introduces the science of crime mapping to police officers, crime analysts, & other people interested in visualizing crime data through the medium of maps. The guide is made up of examples with the words draped around them. Crime analysts & researchers from across the U.S. & from Canada & the United Kingdom have contributed. The guide takes a broad approach addressing the kinds of questions crime mapping can answer & how, in general terms, it can answer them. Presumably most readers will be working in law enforcement agencies. The material is designed primarily for those who know little or nothing about mapping crime & who are motivated to learn more. From the basics such as working with typography through using images and working with color, exploring different pre-press techniques and the processes involved in bringing a product to press and with a resulting pleasing end product, the authors present everything that the reader needs to know in a straightforward and visually strong way. This new edition completely updates the information on the production process, highlighting new techniques and expanding its coverage on digital technologies. In addition, new interviews are included from design studios using creative or unique production techniques. Since students may eventually be working with international clients, the authors includes both metric and imperial measurements so that students will become familiar with the differences. Expanded coverage of environmental and sustainability issues, especially as they relate to paper choice and use of special processes/inks has also been added.

IBM® Content Navigator provides a unified user interface for your Enterprise Content Management (ECM) solutions. It also provides a robust development platform so you can build customized user interface and applications to deliver value and an intelligent, business-centric experience. This IBM Redbooks® publication guides you through the

Content Navigator platform, its architecture, and the available programming interfaces. It describes how you can configure and customize the user interface with the administration tools provided, and how you can customize and extend Content Navigator using available development options with sample code. Specifically, the book shows how to set up a development environment, and develop plug-ins that add an action, service, and feature to the user interface. Customization topics include implementing request and response filters, external data services (EDS), creating custom step processors, and using Content Navigator widgets in other applications. This book also covers mobile development, viewer customization, component deployment, and debugging and troubleshooting. This book is intended for IT architects, application designers and developers working with IBM Content Navigator and IBM ECM products. It offers a high-level description of how to extend and customize IBM Content Navigator and also more technical details of how to do implementations with sample code.
