### Incomplete Acquisition in Bilingualism

Since its launch in 2006, Twitter has evolved from a niche service to a mass phenomenon; it has become instrumental for everyday communication as well as for political debates, crisis communication, marketing, and cultural participation. But the basic idea behind it has stayed the same: users may post short messages (tweets) of up to 140 characters and follow the updates posted by other users. Drawing on the experience of leading international Twitter researchers from a variety of disciplines and contexts, this is the first book to document the various notions and concepts of Twitter communication, providing a detailed and comprehensive overview of current research into the uses of Twitter. It also presents methods for analyzing Twitter data and outlines their practical application in different research contexts.

### Measuring Educational Achievement

There is widespread concern in all English speaking countries at the rapid decline in study of languages. The promise of 'languages for all' in the UK and North America in the 1970s marked a shift from languages as élite subjects for the privileged few, but this promise has not been fulfilled. This book explores the reasons for and solutions to this decline. More importantly, it looks at how these trends have been reversed in successful school programs and the implications of this for

language education policy makers. The study draws on an analysis of data from 600 primary, secondary and community languages schools over six years and from detailed case studies in a representative sample of 45 successful schools. The book proposes a range of strategies to address the decline: from engaging classroom learning, assessment outcomes and embedding languages as central in school curriculum on the one level, to a mix of incentives and mandation for language study, especially at upper secondary school level. The authors explore the impact of learning languages on the thinking, educational experiences and outcomes of young people across a range of ethnic backgrounds and socioeconomic statuses. They show the importance of having equal access to languages study in a world where young people will have increasingly more diverse working lives and argue that the gap in languages between policy and uptake is really a gap in the thinking of policy makers and government.

This edited collection brings to the forefront attempts to connect critical pedagogy and ELT (English Language Teaching) in different parts of the world. The authors in this collection write from their own experiences, giving the chapters nuanced understanding of the everyday struggles that teachers, teacher educators and researchers face within different contexts. Throughout the book, contributors connect micro-contexts (classrooms) with macro-contexts (world migration, politics and social issues) to demonstrate the impact and influences of pedagogy. In problematizing ELT and focusing on so-called 'peripheral' countries where educators have created their own critical pedagogies to respond to their own local realities, the contributors construct ELT in a way that goes beyond the typical ESL/EFL distinction. This unique edited collection will appeal to teacher educators, in-service teachers working in the field as well as students and scholars of English language teaching, second language acquisition and language education policy.

This book examines immigrant student achievement and education policy across a range of Western nations. It is divided into 3 sections: Part 1 introduces the topic of immigrant student achievement and the performance disadvantage that is consistently reported across a range of international jurisdictions. Part 2 then presents national profiles from scholars in ten countries (England, Germany, Italy, Sweden, Finland, Netherlands, Republic of Ireland, Canada, Australia, and New Zealand). These educational jurisdictions were selected because they represent a range of Western nations engaged in large-scale reform efforts geared towards enhancing their immigrant students' achievement. Each of the national profiles provides a brief overview of the evolution of the cultural composition of their respective school-aged student population; explains the trajectory of achievement results in non-immigrant and immigrant student groups in relation to both national and international large-scale assessment measures; and discusses the effectiveness of policy responses that have been adopted to close the achievement gap between non-immigrant and immigrant student populations. It also examines the relationships between education policies and immigrant student achievement and discusses how education policies have evolved across various cultural contexts. In conclusion, Part 3 analyzes cross-cultural approaches designed to address the performance disadvantage of immigrant students and proposes future areas of inquiry stemming from the national profiles. The book offers insights into a diverse cross-section of nations and policy approaches to addressing the performance disadvantage.

## **Roman Provincial Coinage III**

Illuminating, through ethnographic inquiry, how individual agents "make" language policy in everyday social practice, this volume advances the growing field of language planning and policy using a critical sociocultural approach. From this perspective, language policy is conceptualized not only as official acts and documents, but as language-regulating modes of human interaction, negotiation, and production mediated by relations of power. Using this conceptual framework, the volume addresses the impacts of globalization, diaspora, and transmigration on language practices and policies; language endangerment, revitalization, and maintenance; medium-of-instruction policies; literacy and biliteracy; language and ethnic/national identity; and the ethical tensions in conducting critical ethnographic language policy research. These issues are contextualized in case studies and reflective commentaries by leading scholars in the field. *Ethnography and Language Policy* extends previous work in the field, tapping into leading-edge interdisciplinary scholarship, and charting new directions. Recognizing that language policy is not merely or even primarily about language per se, but rather about power relations that structure social-linguistic hierarchies, the authors seek to expand policy discourses in ways that foster social justice for all.

### **World-Readiness Standards for Learning Languages**

LINGUISTICS FOR EVERYONE: AN INTRODUCTION, Second Edition, will capture the interest of all students, regardless of major, and offer them a thorough, engaging introduction to the science of language. To achieve this goal, the authors devised a unique arrangement of chapters that distinguishes this book from conventional introductory linguistics textbooks. Without sacrificing rigor, the authors focus on larger themes rather than on technical details or formal analysis. The book opens with a strong introductory chapter addressing basics such as how to define language, prescriptive versus descriptive grammar, differences between the human language system and other animal communication systems, and so on. The second chapter, devoted to language, mind, and brain, addresses both psycholinguistic and neurolinguistic evidence for humans' innate capacity for language. To address core linguistics areas in depth, there are two chapters each on phonetics and phonology, morphology, syntax, and semantics. Throughout the text, special features relate the study of linguistics to the language we use in the real world and every chapter includes innovative and varied activities that review and practice the content and offer your students many opportunities to apply the knowledge in their own lives. The cross-linguistic differences documented in studies of relative clause attachment offer an invaluable opportunity to examine a particular aspect of bilingual sentence processing: Do bilinguals process their two languages as if they were monolingual speakers of each? This volume provides a review of existing research on relative clause attachment, showing that speakers of languages like English attach relative clauses differently than do speakers of languages like Spanish. Fernández reports the findings of an investigation with monolinguals and bilinguals, tested using speeded ("on-line") and unspeeded ("off-line") methodology, with materials in both English and Spanish. The experiments reveal similarities across the groups when the procedure is speeded, but differences with unspeeded questionnaires: The monolinguals replicate the standard cross-linguistic differences, while bilinguals have language-independent preferences determined by language dominance — bilinguals process stimuli in either of their languages according to the general preferences of monolinguals of their dominant language.

### **International Perspectives on Critical Pedagogies in ELT**

This volume presents the results of the largest ever language attitude/motivation survey in second language studies. The research team gathered data from over 13,000 Hungarian language learners on three successive occasions: in 1993, 1999

and 2004. The examined period covers a particularly prominent time in Hungary's history, the transition from a closed, Communist society to a western-style democracy that became a member of the European Union in 2004. Thus, the book provides an 'attitudinal/motivational flow-chart' describing how significant sociopolitical changes affect the language disposition of a nation. The investigation focused on the appraisal of five target languages – English, German, French, Italian and Russian – and this multi-language design made it also possible to observe the changing status of the different languages in relation to each other over the examined 12-year period. Thus, the authors were in an ideal position to investigate the ongoing impact of language globalisation in a context where for various political/historical reasons certain transformation processes took place with unusual intensity and speed. The result is a unique blueprint of how and why language globalisation takes place in an actual language learning environment.

Age effects have played a particularly prominent role in some theoretical perspectives on second language acquisition. This book takes an entirely new perspective on this issue by re-examining these theories in light of the existence of apparently similar non-native outcomes in adult heritage speakers who, unlike adult second language learners, acquired two or more languages in childhood. Despite having been exposed to their family language early in life, many of these speakers never fully acquire, or later lose, aspects of their first language sometime in childhood. The book examines the structural characteristics of "incomplete" grammatical states and highlights how age of acquisition is related to the type of linguistic knowledge and behavior that emerges in L1 and L2 acquisition under different environmental circumstances. By underscoring age of acquisition as a unifying factor in the study of L2 acquisition and L1 attrition, it is claimed that just as there are age effects in L2 acquisition, there are also age effects, or even perhaps a critical period, in L1 attrition. The book covers adult L2 acquisition, attrition in adults and in children, and includes a comparison of adult heritage language speakers and second language learners.
