Mosby's Radiation Therapy Study Guide and Exam Review - E-Book

Just as demographic studies of the human population reveal a steep increase in the number of people living to a very old age, there has been a corresponding increase in the number of people residing in nursing homes. The majority of these residents are suffering from mental or neurobehavioral illnesses and are in need of physicians qualified to deal with the scope of geriatric psychiatry. This book presents a comprehensive survey of the present state of knowledge about psychiatric illness in the long-term care setting. Recognized experts in geriatrics and geriatric psychiatry provide practical recommendations for the evaluation and treatment of psychiatric disorders that complicate the care of nursing home residents. Among the topics covered in detail are the phenomenology, diagnosis, and therapy of depression, anxiety, agitation, sexual dysfunction, sleep disorders, substance abuse, and psychosis. Modern strategies for successful psychopharmacologic and psychotherapeutic measures are examined in detail, and special considerations related to dementia and delirium in the nursing home setting are discussed. Complementing these clinical guidelines are chapters specifically devoted to ethical and medicolegal issues, as well as the special needs of nursing home residents with mental retardation. All professionals in the geriatric mental health field, including internists, family practitioners, psychiatrists, psychiatric nurses, gerontologists, and social workers, will find this book invaluable.

Biology

This is the proceedings of the fourth in a series of international gatherings on kindling held on the University of British Columbia campus, June 15-17, 1989. Since the last gathering in 1985, kindling continues to attract an ever-increasing number of investigators as reflected by the phenomenal increase in the number of kindling-related research reports. No other acute or chronic model has been exploited so extensively using electrophysiological, pharmacological, biochemical and behavioural approaches involving a variety of brain sites and animal species. The continuing search, during the past few years, for the mechanism underlying the enduring change induced by kindling is beginning to shed some light on aspects of its molecular basis and to suggest the future direction of research. The late Graham Goddard, the original kindler, would have been delighted with this development. We were all shocked and saddened by his tragic death, but his spirit is very much alive among all of us who gathered together to share new information and collectively reassess the present state of knowledge at this symposium. I must say that we miss him very, very much. We know he is happy in his heaven knowing that he accomplished more in a short lifetime than most and that his love for mankind, and life's challenges, remain as a legacy, and goal, for us all.

increased importance of fungal and viral diseases and their serious impact on Cavendish export cultivars, smallholder plantains and cooking bananas. Changes in production systems such as protected greenhouse cultivation, organic, fair-trade and integrated cultivation and their respective certification schemes have also become prominent. This book provides an accessible review of the scientific principles of banana production and how these relate to field practices. This new edition has expanded coverage of world trade statistics and policies, breeding of new cultivars in relation to disease resistance and markets, prospects for genetically-modified bananas and the increasing role of endophytes in controlling pests and diseases.
