The safety of fresh meat continues to be a major concern for consumers. As a result, there has been a wealth of research on identifying and controlling hazards at all stages in the supply chain. Improving the Safety of Fresh Meat reviews this research and its implications for the meat industry. Part I discusses identifying and managing hazards on the farm. There are chapters on the prevalence and detection of pathogens and on chemical and other contaminants. A number of chapters also discuss ways of controlling such hazards in the farm environment. Part II of the book reviews the identification and control of hazards during and after slaughter. There are chapters on both contamination risks and how they can best be managed. The book also discusses the range of decontamination techniques available to meat processors as well as such areas as packaging and storage. With its distinguished editor and international team of contributors, Improving the Safety of Fresh Meat will be a standard reference for the meat industry.

Membrane Technology and Applications

“ the best handbook on membrane technology, which is currently on the market ”
–Membrane News (on the previous edition) Building on the success of the previous edition, Membrane Technology and Applications Third Edition provides a comprehensive overview of separation membranes, their manufacture and their applications. Beginning with a series of general chapters on membrane preparation, transport theory and concentration polarization, the book then surveys several major areas of membrane application in separate chapters. Written in a readily accessible style, each chapter covers its membrane subject thoroughly, from historical and theoretical backgrounds through to current and potential applications. Topics include reverse osmosis, ultrafiltration, pervaporation, microfiltration, gas separation and coupled and facilitated transport; chapters on electrodialysis and medical applications round out the coverage. NEW TO THE THIRD EDITION New sections on the use of membranes in the chlor-alkali industry, membrane distillation, pressure retarded osmosis and constant flux-variable pressure ultrafiltration Zeolite and ceramic membranes,
