Using mathematical metaphor, Cohen touches deeply into issues of life and heart. In each poem she crosses the equal sign on many levels, beginning with visible points, lines, and numbers, crossing over to life's invisible-yet-tangible delights and frustrations and crossing back again with insights gleaned from these reflections.

A Framework for Assessing Effects of the Food System

How we produce and consume food has a bigger impact on Americans' well-being than any other human activity. The food industry is the largest sector of our economy; food touches everything from our health to the environment, climate change, economic inequality, and the federal budget. From the earliest developments of agriculture, a major goal has been to attain sufficient foods that provide the energy and the nutrients needed for a healthy, active life. Over time, food production, processing, marketing, and consumption have evolved and become highly complex. The challenges of improving the food system in the 21st century will require systemic approaches that take full account of social, economic, ecological, and evolutionary factors. Policy or business interventions involving a segment of the food system often have consequences beyond the original issue the intervention was meant to address. A Framework for Assessing Effects of the Food System develops an analytical framework for assessing effects associated with the ways in which food is grown, processed, distributed, marketed, retailed, and consumed in the United States. The framework will allow users to recognize effects across the full food system, consider all domains and dimensions of effects, account for systems dynamics and complexities, and choose appropriate methods for analysis. This report provides example applications of the framework based on complex questions that are currently under debate: consumption of a healthy and safe diet, food security, animal welfare, and preserving the environment and its resources. A Framework for Assessing Effects of the Food System describes the U.S. food system and provides a brief history of its evolution into the current system. This report identifies some of the real and potential implications of the current system in terms of its health, environmental, and socioeconomic effects along with a sense for the complexities of the system, potential metrics, and some of the data needs that are required to assess the effects. The overview of the food system and the framework described in this report will be an essential resource for decision makers, researchers, and others to examine the possible impacts of alternative policies or agricultural or food processing practices.

Writer's block and a looming Christmas novel deadline have romance novelist, Sarah Jones, heading for the other side of the world on a whim. Niklas Toivonen offers cosy Lapland accommodation, but when his aging father falls ill, Niklas is called upon to step into his father's work clothes to make children happy. Red is quite his color. Fresh off the airplane, a visit to Santa sets Sarah's muse into overdrive. The man in red is not only entertaining, he's young-with gorgeous blue eyes. Much like her new landlord's, she discovers. Santa and Niklas quickly become objects of research-for her novel, and her curiosity. Though she's written countless happily-ever-afters, Sarah doubts she'll ever enjoy her own. Niklas must find a way to show her how to leave the pain of her past behind, so she can find love and faith once more.

APICS, the Performance Advantage
