It's so easy to forget what the Christian faith is all about. We struggle so much, work so hard, and fail so often that we frequently sense something in the equation of life must be missing. Tullian Tchividjian argues that what we are missing is the gospel—a fuller, more powerful understanding of what the finished work of Jesus means for everyday life. During a year of great turmoil, Pastor Tchividjian discovered the power of the gospel in his own life. Sharing his story of how Jesus became more real to him, Tchividjian delves deeply into the fundamentals of the faith, explaining the implications of Christ's sufficiency, a revelation that sets us free and keeps us anchored through life's storms. Ultimately, Tchividjian reminds us that Jesus is the whole of the equation as he boldly proclaims that Jesus plus nothing really is everything.

John Fante, an important figure in the history of the Italian-American novel, is proving to be fascinating to contemporary readers. Richard Collins has caught Fante's spirit from several crucial angles: as an ethnic writer; as a comic novelist; as a serious writer struggling to remain so in Hollywood. Intelligent, balanced, informative, and empathetic, this book combines criticism with scholarship, and biography with history to make what Henry James would have called a perfect 'literary portrait,' for it gives life to an interesting subject.

JSP developers encounter unique problems when building web applications that require intense database connectivity. MySQL and JSP Web Applications addresses the challenges of building data-driven applications based on the JavaServer Pages development model. MySQL and JSP Web Applications begins with an overview of the core technologies required for JSP database development--JavaServer Pages, JDBC, and the database schema. The book then outlines and presents an Internet commerce application that demonstrates concepts such as receiving and processing user input, designing and implementing business rules, and balancing the user load on the server. Through the JDBC (Java DataBase Connector), the developer can communicate with most commercial databases, such as Oracle. The solutions presented in MySQL and JSP Web Applications center on the open source tools MySQL and Tomcat, allowing the reader an affordable way to test applications and experiment with the book's examples.

The 5 Years Before You Retire

This collection of critical essays on the fiction of John Fante is the first concerted effort to assess the work, and acknowledge the significance, of one of America's most engaging and original twentieth-century literary talents. Over the span of a half-century - from the early 1930s to the early 1980s - the Italian-American Fante (1909-1983) wrote short stories and novels that drew on his own life from his Catholic childhood in Colorado through his down-and-out days in Los Angeles, to his adventures as a screenwriter in Hollywood. He writes about all these things with gusto, humor, directness, and an honesty tinged with the irony of a true modernist.

Tempting Evil

It's not every day that a writer, almost unheard of in his lifetime, emerges twenty years after his death as a voice of his generation. But then again, there aren't many writers with such irrepressible genius as John Fante. The John Fante Reader is the important next step in the reintroduction of this influential author to modern audiences. Combining excerpts from his novels and stories, as well as his never-before-published letters, this collection is the perfect primer on the work of a writer -- underappreciated in his time -- who is finally taking his place in the pantheon of twentieth-century American writers.

Department of Education Acquisition Regulation (Us Department of Education Regulation) (Ed) (2018 Edition)

In this biography of John Fante, one of the great lost souls of 20th-century literature, Stephen Cooper untangles the enigma of an authentic American original. By turns savage and poetic, violent and full of love, such novels as 'Ask the Dust' reveal and disguise the author.

Finance and Financial Markets

Barbara Coloroso's powerful message is that good parenting begins with treating kids with respect. It means giving them a sense of power in their own lives, and offering them opportunities to make decisions, take responsibility for their actions, and learn from their own successes and mistakes. Rejecting the "quick fix" solutions of punishment and reward, she uses everyday family situations from sibling rivalry to teenage rebellion to demonstrate sound strategies for giving children the inner discipline and self-confidence that will help them grow into responsible, resourceful, and resilient adults. Discover:

- Three basic tenets to a good parent/child relationship
- Why discipline is not learned through threats and bribes
- Why teaching a child how to think instead of what to think builds self-confidence
- The good news about the strong-willed child
- Three alternatives to always saying "No"
- How to buffer your children from the dangers of sexual promiscuity, drug abuse, and other self-destructive behavior
- Using mealtime, bedtime, toilet-training, chores, allowance, and sibling rivalry as

opportunities to help children develop their own sense of inner discipline

The thought-provoking, timely second edition continues to offer a comprehensive, global perspective on organizational communication. The authors' multinational experience, consulting and teaching expertise, enthusiasm for their subject, and engaging style of writing create an inviting foundation for the exploration of this multifaceted topic. Each chapter demonstrates the practicality of theory and how practice contributes to the development of theory, while challenging readers to build on established knowledge to develop new approaches to the pressing problems in complex, multicultural organizations. The text is organized topically around the most important issues in organizational communication. Five themes recur throughout the chapters: the interdependence of internal and external forms of organizational communication, the disciplinarity and multidisciplinarity of organizational communication, global and multicultural perspectives of organizational communication, the unity of theory and practice, and critical thinking in the analysis of organizational messages and discourses. Discussions highlight language and symbolism. The authors weave analysis of the multiple levels of messages throughout the chapters; stimulate critical thinking about contemporary work and organizational life; approach the familiar as unfamiliar; ask probing questions about commonly accepted practices; and offer more imaginative ways of working together. Readers gain an appreciation for the social, political, economic,

technological, and ideological contexts in organizations and the place of organizations within the broader culture. The authors lead by example in encouraging readers to think about, talk about, and experience organizational communication in entirely new ways.

The Big Hunger

Chess is 99% tactics. If this celebrated observation is true for the master, how much more so for beginners and casual players! If you want to win more games, nothing works better than training combinations. There are two types of books on tactics, those that introduce the concepts followed by some examples, and workbooks that contain numerous exercises. Chess masters and trainers Franco Masetti and Roberto Messa have done both: they explain the basic tactical ideas AND provide an enormous amount of exercises for each different theme. Masetti and Messa have created a great first tactics book. It teaches you how to: - identify weak spots in the position of your opponent - recognize patterns of combinations - visualize tricks. 1001 Chess Exercises for Beginners can also be used as a course text book, because only the most didactically productive exercises have been used.

Low velocity drop weight instrumented impact testing was utilized to examine the damage resistance of four recently developed carbon fiber/epoxy resin systems. A fifth material, T300/934, for which a large data base exists, was also tested for comparison purposes. A 16-ply quasi-isotropic lay-up configuration was used for all the specimens. Force/absorbed energy-time plots were generated for each impact test. The specimens were cross-sectionally analyzed to record the damage corresponding to each impact energy level. Maximum force of impact versus impact energy plots were constructed to compare the various systems for impact damage resistance. Results show that the four new damage tolerant fiber/resin systems far outclassed the T300/934 material. The most damage tolerant material tested was the IM7/1962 fiber/resin system. Lance, D.
