public sector managers in the Gulf Cooperation Council (GCC) countries. The chapters in the book examine the main areas of importance for public sector leaders; they have been grouped into four distinct categories: strategic management, organisational performance, e-government and national identity. The objective of "Critical Thoughts From A Government Perspective" is to: help augment recent public sector development efforts in the GCC; contribute to the advancement of research on the GCC; and serve as knowledge building tools for those interested in learning about public sector management practices in GCC countries. Key Features Many books about the GCC governmental sector are typically written from either a purely academic perspective or present a small subset of available research, thereby failing to capture critical management issues and considerations. Therefore, "Critical Thoughts From A Government Perspective" not only embodies insights based on extensive research but also the collective insights of numerous senior government practitioners. "Critical Thoughts From A Government Perspective" has been written from a philosophical 'mind-set' in the sense that if we need to improve our organisations and thereafter our nations, we need to be transparent when we share knowledge and practices. "Critical Thoughts From A Government Perspective" is easy-to-read and is highly practical. The Author Dr Al-Khoury is the Director General (Under Secretary) of the Emirates Identity Authority: a federal government organisation established in 2004 to rollout and manage the national identity management infrastructure program in the United Arab Emirates. Integrating ideas from the fields of systems science and knowledge science, Knowledge and Systems Science: Enabling Systemic Knowledge Synthesis shows how to create and justify various pieces of knowledge systemically. Written by one of the foremost experts in this area, the book presents approaches for the systemic integration of knowledge, which can help solve complex problems today and in the future. After discussing issues of systemic knowledge synthesis, the book emphasizes the importance of the human dimension in problem solving and introduces a new integrated systems approach called the informed systems approach. It also covers mathematical information aggregation techniques. Moving on to knowledge science concepts and approaches, the book discusses organizational and academic knowledge creation models and considers a sociological interpretation of the knowledge integration system. To support knowledge science as an academic discipline, the author explains how to justify knowledge and summarizes a theory of knowledge synthesis (construction) systems. Through case studies of technology archiving, academic research evaluation, demand forecasting of perishable foods, and other real-world concerns, this book demonstrates the use of new knowledge-based methods in addressing a variety of complex issues. It also illustrates the importance of acquiring a systemic view through trained intuition.
