God Wills It! The cry is taken up, echoes forth and is carried on. Wave upon wave of Christian pilgrims rush to assault the growing power of Muslims in the Holy Land and will do so for the next two hundred years. Most able men become soldiers of the Cross, and when a man is prevented by old age or ill health, he sends his son. Women, too, go to fight alongside the men. It is a time of great adventure, of great exploration and cultural change. Uniting Christian Europe in a common cause, the crusades defined forever the spirit of the West.

President Clinton recently directed the National Economic Council, in consultation with executive branch agencies, to analyze the economic implications of the Internet and electronic commerce domestically and internationally, and to consider new types of data collection and research that could be undertaken by public and private organizations. This book contains work presented at a conference held by executive branch agencies in May 1999 at the Department of Commerce. The goals of the conference were to assess current research on the digital economy, to engage the private sector in developing the research that informs investment and policy decisions, and to promote better understanding of the growth and socioeconomic implications of information technology and electronic commerce. Aspects of the digital economy addressed include macroeconomic assessment, organizational change, small business, access, market structure and competition, and employment and the workforce.
