Why, when traditionally organized religious groups are seeing declining membership and participation, are networks of independent churches growing so explosively? Drawing on in-depth interviews with leaders and participants, *The Rise of Network Christianity* explains the social forces behind the fastest-growing form of Christianity in the U.S., which Brad Christerson and Richard Flory have labeled "Independent Network Charismatic." This form of Christianity emphasizes aggressive engagement with the supernatural—including healing, direct prophecies from God, engaging in "spiritual warfare" against demonic spirits—and social transformation. Christerson and Flory argue that macro-level social changes since the 1970s, including globalization and the digital revolution, have given

competitive advantages to religious groups organized as networks rather than traditionally organized congregations and denominations. Network forms of governance allow for experimentation with controversial supernatural practices, innovative finances and marketing, and a highly participatory, unorthodox, and experiential faith, which is attractive in today's unstable religious marketplace. Christerson and Flory hypothesize that as more religious groups imitate this type of governance, religious belief and practice will become more experimental, more orientated around practice than theology, more shaped by the individual religious "consumer," and authority will become more highly concentrated in the hands of individuals rather than institutions. Network Christianity, they argue, is the future of Christianity in America.

The City in the Experience Economy

In 1999, Joseph Pine and James Gilmore offered this idea to readers as a new way to think about connecting with customers and securing their loyalty. As a result, their book *The Experience Economy* is now a classic, embraced by readers and companies worldwide and read in more than a dozen languages. And though the world has changed in many ways since then, the way to a customer's heart has not. In fact, the idea of staging experiences to leave a memorable—and lucrative—impression is now more relevant than ever. With an ongoing torrent of brands attacking consumers from all sides, how do you make yours stand out? Welcome to the new Experience Economy. With this fully updated edition of the book, Pine and Gilmore make an even stronger case that experience is the missing link between a company and its potential audience. It offers new rich examples—including the U.S. Army, Heineken Experience, Autostadt, Vinopolis, American Girl Place, and others—to show fresh approaches to scripting and staging compelling experiences, while staying true to the very real economic conditions of the day.

The Expertise Economy

Hundreds of millions of people in China, India, Indonesia, and Brazil are eager to enter the marketplace. Yet multinational companies typically pitch their products to emerging markets' tiny segment of affluent buyers, and thus miss out on much larger markets further down the socioeconomic pyramid—which local rivals snap up. By applying the authors' recommendations, you can position yourself to compete innovatively in developing countries—and to unlock major new sources of revenue for your business. Since 1922, *Harvard Business Review* has been a leading source of breakthrough ideas in management practice. The *Harvard Business Review Classics* series now offers you the opportunity to make these seminal pieces a part of your permanent management library. Each highly readable volume contains a groundbreaking idea that continues to shape best practices and inspire countless managers around the world.

Welcome to the Experience Economy

Creating Experiences in the Experience Economy focuses on the creation of experience from a business perspective. In doing so, the book establishes a more solid foundation for making better and more complex analyses of experience creation, paving the way for the development of analytically based and innovative experiences in experience firms and institutions. The contributors emphasise that experience creation is not an easy task with a straightforward formula and examine how marketed experiences are constructed, developed and innovated. Presenting diverse and innovative perspectives, the contributors discuss and present models for how experiences are designed, produced and distributed. With its cross-disciplinary approach to experience creation, this fascinating study will appeal to researchers and academics of business administration, services, culture and tourism.

The Relationship Economy

This book explores the dynamics of place, location and territories from the perspective of an experience-based economy. It offers a valuable contribution to this new approach and the planning and management challenges it faces. This book emphasises three key avenues to understanding the experience economy. First, the book reconsiders innovation processes and the relationship between the consumption and production of experience value. Second, it considers emerging forms of governance related to experience-based development in businesses and cities. Third, it examines the role of place as a value, resource and outcome of experiential innovation and planning. This book will be of interested to researchers concerned with urban and regional development.

The Age of Experiences

To survive in today's complex economies, it is imperative for companies to understand their consumers in terms of how and why they like to use their products. Distinction based on quality no longer provides competitive advantage. Imagineers use design methods to create meaningful experiences that connect consumers to brands, employees to companies and consumers to consumers. This book explains the background of the need for experiences and then focusses on how to design them. Bringing theory into practice for students of tourism marketing, event planning and business, it provides a window into the creative world of Imagineering.

The Site Reliability Workbook

The book develops a new approach to urban development in which leisure, pleasure or experiences are seen as key drivers. History, authenticity, urban

qualities, local culture and leisure offerings or a vibrant retail sector are thus assets in local development also outside of the big cities. Globalization and high mobility are necessary aspects of the development, which entails the development of high urban profiles in a globalized and highly competitive world. Apart from experiential qualities a critical urban size, is also required. Experience qualities can be connected to urban design, where particular designs stimulate citizens' learning and activity in the urban space. They can also be connected to more tourist related large scale projects of experiential mass consumption with fun parks and shopping. A combination of the two approaches has been developed to promote for example car brands and cities through experiential car museums. New stakeholders, new network based forms of cooperation and new entrepreneurial strategies are connected to urban development in 'the experience economy'. In particular new network based approaches are needed if small and rural places should also reap the fruits of the experience economy. This book was originally published as a special issue of European Planning Studies.

Question Behind the Question

In *The Age of Experiences*, Benjamin Kline Hunnicutt examines how the advance of happiness science is impacting the economy, making possible new experience-products that really make people happy and help forward-looking businesses expand and develop new technologies. In today's marketplace there is less interest in goods and services and more interest in buying and selling personal improvements and experiences. Hunnicutt traces how this historical shift in consumption to the "softer" technologies of happiness represents not only a change in the modern understanding of progress, but also a practical, economic transformation, profoundly shaping our work and the ordering of our life goals. Based on incisive historical research, Hunnicutt demonstrates that we have begun to turn from material wealth to focus on the enrichment of our personal and social lives. *The Age of Experiences* shows how industry, technology, and the general public are just beginning to realize the potential of the new economy. Exploring the broader implications of this historical shift, Hunnicutt concludes that the new demand for experiences will result in the reduction of work time, the growth of jobs, and the regeneration of virtue--altogether an increasingly healthy public life.

The Technology Trap

Offers advice on developing solutions that avoid blame to address such issues as how to improve a situation, recognize individual contributions, and emphasize personal solutions in order to improve service, teamwork, and adaptability.

Handbook on the Experience Economy

In an increasingly experience-driven economy, companies that deliver great experiences thrive, and those that do not die. Yet many organizations face difficulties implementing a vision of delivering experiences beyond the provision of goods and services. Because experience design concepts and approaches are spread across multiple, often disconnected disciplines, there is no book that succinctly explains to students and aspiring professionals how to design them. J. Robert Rossman and Mathew D. Duerden present a comprehensive and accessible introduction to experience design. They synthesize the fundamental theories and methods from multiple disciplines and lay out a process for designing experiences from start to finish. Rossman and Duerden challenge us to reflect on what makes a great experience from the user's perspective. They provide a framework of experience types, explaining people's engagement with products and services and what makes experiences personal and fulfilling. The book presents interdisciplinary research underlying key concepts such as memory, intentionality, and dramatic structure in a down-to-earth style, drawing attention to both the macro and micro levels. *Designing Experiences* features detailed instructions and numerous real-world examples that clarify theoretical principles, making it useful for students and professionals. An invaluable overview of a growing field, the book provides readers with the tools they need to design innovative and indelible experiences and to move their organizations into the experience economy. *Designing Experiences* features a foreword by B. Joseph Pine II.

Story-Based Inquiry: A Manual for Investigative Journalists

Everyone working in the space of brands, marketing and communications has seen their job change rapidly in recent years. In particular, the agency business has been forced to rethink and redefine its role. As well, the impact of the new economy and the establishment of the experience economy model has changed everything we have known about marketing, brands, customer perspectives and the rules & dynamics defining the relationship between these elements. Multidisciplinary & inclusion have become mandatory requirements for everyone, dethroning traditional “Creatives” from the leadership to a more equal level with other disciplines & practices. Data & Technology have become the new language; Design & Experience are the new religions; a new generation of leadership is rising with a system consciousness as an effect of the digital age. I truly believe in the power of sharing to make changes, and this is the reason why I am sharing this work. After spending the last 20 years in different business contexts as a consultant for private companies and startups; as a chief design officer for a venture incubator and an executive for agencies, I decided to summarize everything I have observed and discovered about the relationships between companies, teams, operational models, business results, innovation and growth in this blueprint. I do not expect everyone to agree with my work and my vision won't be a fit for all, but I am sure that everyone will find something in these pages useful and different from their perspective capable of stimulating questions or reflections. How can company management organization be more holistic, multidisciplinary, integrated, human-centered, systematic, inclusive and create the conditions to trigger innovation?

Designing the Digital Experience

Creating Authentic Customer Connections in a High-Tech World In The Relationship Economy, author John Dijulius teaches business leaders about the importance of relationship building in the digital age. He argues that in spite of (and because of) the advances in tech, we've become a less connected society. We have dramatically evolved away from face-to-face communication, and the skill of building rapport is evaporating. This means that customer personalization and relationships are more important now than ever—and they will be the key to success for businesses moving forward. As he aptly states, “Being able to build true sustainable relationships is the biggest competitive advantage in a world where automation, artificial intelligence, and machine learning are eliminating the human experience, which is what creates the emotional connections that build true customer loyalty.” This book reminds readers of the importance of personal connections and shows them how to attain meaningful, lasting relationships with their customers.

Anna Klingmann looks at the controversial practice of branding by examining its benefits, and considering the damage it may do. She argues that architecture can use the concepts and methods of branding - not as a quick-and-easy selling tool for architects but as a strategic tool for economic and cultural transformation.

Disrupting Digital Business

We are no longer an economy of products and services. The digital transformation demands that we focus our attention on experiences and outcomes. Business leaders and their organizations must shift to keeping promises—no matter how their customers interact with them. But organizations no longer control the conversation. In this era of social and mobile technology, customers, employees, suppliers, and partners are in direct communication with one another. Those personal networks and the brands they're passionate about influence their decision making and their spending. The workforce has changed too. Employees expect to be able to determine when and how they will work, the technology they'll use, and the values their company will espouse. Organizations can take part in this conversation only if they recognize how and where it's happening. Resisting these changes will leave executives, managers, and their companies powerless. Organizations must pivot with and ahead of these social, organizational, and technological shifts or risk being left behind. Technology guru Ray Wang shows how organizations can surf the waves of change—how they can keep their promises. Current trends, when taken seriously, require a new way of thinking about business that includes five key areas: 1. Consumerization of technology and the new C-suite 2. Data's influence in driving decisions 3. Digital marketing transformation 4. The future of work 5. Matrix commerce Digital disruption has changed how we do our work. But by mastering these trends you'll delight your customers with every interaction.

The Great Stagnation

The New York Times bestselling authors of *Switch* and *Made to Stick* explore why certain brief experiences can jolt us and elevate us and change us—and how we can learn to create such extraordinary moments in our life and work. While human lives are endlessly variable, our most memorable positive moments are dominated by four elements: elevation, insight, pride, and connection. If we embrace these elements, we can conjure more moments that matter. What if a teacher could design a lesson that he knew his students would remember twenty years later? What if a manager knew how to create an experience that would delight customers? What if you had a better sense of how to create memories that matter for your children? This book delves into some fascinating mysteries of experience: Why we tend to remember the best or worst moment of an experience, as well as the last moment, and forget the rest. Why “we feel most comfortable when things are certain, but we feel most alive when they're not.” And why our most cherished memories are clustered into a brief period during our youth. Readers discover how brief experiences can change lives, such as the experiment in which two strangers meet in a room, and forty-five minutes later, they leave as best friends. (What

happens in that time?) Or the tale of the world's youngest female billionaire, who credits her resilience to something her father asked the family at the dinner table. (What was that simple question?) Many of the defining moments in our lives are the result of accident or luck—but why would we leave our most meaningful, memorable moments to chance when we can create them? *The Power of Moments* shows us how to be the author of richer experiences.

The Experience Economy

Be Our Guest

" Joseph Pine and Jim Gilmore's classic *The Experience Economy* identified a seismic shift in the business world: to set yourself apart from your competition, you need to stage experiences—memorable events that engage people in inherently personal ways. But as consumers increasingly experience the world through their digital gadgets, companies still only scratch the surface of technology-infused experiences. So Pine and coauthor Kim Korn show you how to create new value for your customers with offerings that fuse the real and the virtual. Think of the Xbox Kinect, which combines virtual video games with a powerful physical dimension—you play by moving your own body; new apps that, when you point your smartphone camera at a real street, overlay digital information about the scene onto the image; and virtual dashboards that track the real world, moment by moment. Digital technology offers limitless opportunities—you really can create anything you want—but real-world experiences have a richness that virtual ones do not. So how can you use the best of both? How do you make sense of such infinite possibility? What kinds of experiences can you create? Which ones should you offer? Pine and Korn provide a profound new tool geared to exploring and exploiting the digital frontier. They delineate eight different realms of experience encompassing various aspects of Reality and Virtuality and, using scores of examples, show how innovative companies operate within and across each realm to create extraordinary customer value. Follow them out onto the digital frontier to discover the opportunities that abound for your business. "

The End of Corporate Imperialism

Contemporary architecture of theme-based design is examined in this book, leading to a new understanding of architecture's role in the increasingly diversified consumer environment. It explores the 'Experience Economy' to reveal how everyday environments strategically and opportunistically blur our leisure, work, and personal life experiences. Considering scientific design research, consumer psychology, and Hollywood story-telling techniques, the book looks at how the design of theme parks, casinos, and shopping malls has influenced our more unexpectedly themed spaces, from the city to the hospital. Widely taking architecture as a social practice, this text is of relevance to all cultural and sociological studies in the built and material environment.

Imagineering: Innovation in the Experience Economy

Tyler Cowen's controversial New York Times bestseller—the book heard round the world that ignited a firestorm of debate and redefined the nature of America's economic malaise. America has been through the biggest financial crisis since the great Depression, unemployment numbers are frightening, media wages have been flat since the 1970s, and it is common to expect that things will get worse before they get better. Certainly, the multidecade stagnation is not yet over. How will we get out of this mess? One political party tries to increase government spending even when we have no good plan for paying for ballooning programs like Medicare and Social Security. The other party seems to think tax cuts will raise revenue and has a record of creating bigger fiscal disasters than the first. Where does this madness come from? As Cowen argues, our economy has enjoyed low-hanging fruit since the seventeenth century: free land, immigrant labor, and powerful new technologies. But during the last forty years, the low-hanging fruit started disappearing, and we started pretending it was still there. We have failed to recognize that we are at a technological plateau. The fruit trees are barer than we want to believe. That's it. That is what has gone wrong and that is why our politics is crazy. In *The Great Stagnation*, Cowen reveals the underlying causes of our past prosperity and how we will generate it again. This is a passionate call for a new respect of scientific innovations that benefit not only the powerful elites, but humanity as a whole.

Mastering the Way You See the World Inspired by Edward de Bono's Six Thinking Hats method, Jim Gilmore has created a unique and useful tool to help our ability to perceive. In his latest book, *Look: A Practical Guide for Improving Your Observational Skills*, Gilmore introduces the metaphor of "six looking glasses." Each looking glass represents a particular skill to master in order to enhance the way we look at the world. The six skills include binoculars, bifocals, magnifying glass, microscope, rose-colored glasses, and blindfold looking. Each looking glass provides an observational lens through which to see the world differently. This framework will help its users to:

- See the big picture
- Overcome personal bias
- Pinpoint significance
- Better scrutinize numerous details
- Uncover potential opportunities
- See what's in the mind's eye

These varying perspectives offer myriad practical applications: They can help any executive, manager, or designer more richly observe customer behavior, philanthropists and policy makers more

keenly identify human needs, and anyone else interested in innovative thinking to first ground their ideation in practical observation. Gilmore helps readers grasp the Six Looking Glasses by including helpful everyday examples and practice exercises throughout. Put into practice, this method of looking will help you see the world with new eyes.

The Experience Economy, Updated Edition

Customer experience unlike other business differentiators, has proven to be the biggest competitive advantage of the most successful brands and organizations in the twenty-first century. Why is that so? We are now in what is called the age of the customer. Technology and other socioeconomic factors have given customers more choices and power than ever before. This has also given them control over the brand image. After all, studies show that 90 percent of customers trust a recommendation from another customer, but only 4 percent believe the traditional marketing. Additionally, technology has enabled disruptive businesses to change the competitive landscape dramatically and frequently. Organizations can no longer think their competitors are solely in their industry. Anyone is a potential competitor. Just think of how Apple changed the music industry, and how Uber changed the taxi industry - the list goes on and on. So how can businesses survive in the midst of all of this apparent chaos? By focusing on -the single most important factor for business success- - customer experience! But what is customer experience? Is it different from customer service? And how does it help businesses achieve long-term success? Is customer experience just for the service industry or can any industry benefit from it? Does it work for b2b or is it only for b2c? Is it a fad or something for the long run? Is it relevant for mature companies and startups alike? Which companies use it as a competitive advantage? And how can I use it? I have been asked all these questions so frequently, that I decided to share the answers with a broader audience, and this includes you! I wrote this

book because it is time for you to know more about customer experience in order to successfully implement it in a one-employee startup or a big global organization. This book is for doers who believe the customer is indeed king. Welcome to the experience economy!

The authors provide the latest scientific research on how people really learn and concrete examples from companies in both Silicon Valley and worldwide who are driving the conversation about how to create experts and align learning innovation with business strategy. Brandscapes

The experience economy is a fourth economic field different from commodities, goods and services. Experiences are an economic value added to a product or identical with the product. When you buy an experience, you pay to spend time enjoying a series of memorable events that a company stages to engage the customer in a personal way. The experience dimension has moved into a predominant place since the 1990s, fueled by an expanding global and digital economy. In developed countries, people get richer and more individualized and having met all basic material needs, they focus increasingly on personal development and self realization. Demand for experience-based products increases, such as tourism and sports as well as film, music and other contents of media and interactive technologies. Furthermore, the demand for experience values is extended to include any product and dimension of modern societies, such as the design of houses, furniture, clothes, cars, computers, etc. This is not a completely new story. Commercial entertainment and design has been around for a century or so. And in addition, universal values of love, sex, belief, family and the meaning of life have always been vital to human beings. What is new is the fact that capitalism is invading more and more fields of experiences connected with emotions and the extension of life proportions. In all developed countries and increasingly on a global scale, a series of expanding industries have emerged to supply the market with experience-oriented goods. In this book, the business development of markets and industries is covered from tourism, to media and entertainment, and from design to sex, including leading companies and trends in all industries involved.

Enterprising Initiatives in the Experience Economy

How the history of technological revolutions can help us better understand economic and political polarization in the age of automation The Technology Trap is a sweeping account of the history of technological progress and how it has radically shifted the distribution of economic and political power among society's members. As Carl Benedikt Frey shows, the Industrial Revolution created unprecedented wealth and prosperity over the long run, but the immediate consequences of mechanization were devastating. Middle-income jobs withered, wages stagnated, the labor share of income fell, profits surged, and economic inequality skyrocketed. These trends broadly mirror those in our current age of automation. But, just as the Industrial Revolution eventually brought about extraordinary benefits for society, artificial intelligence systems have the potential to do the same. The Technology Trap demonstrates that in the midst of another technological revolution, the lessons of the past can help us to more effectively face the present.

The Experience Economy, Updated Edition

Over the last decade, the close relationship between culture and economy - or "the experience economy" - has risen on the agenda. Although there is an established research field for analysing the economic impact of entrepreneurship, there is currently a limited amount of research that analyses the cultural impact and opportunity of entrepreneurship. Linking experience economy with enterprising behavior moves the term away from businesses' competitiveness and consumer behavior towards a more value-focused business in general. This ground-breaking book integrates entrepreneurship and empowerment into one central theme, drawing on research from both the social sciences (innovation, entrepreneurship, empowerment and activism) and the humanities (participatory culture, user-generated designs, creative networks). Enterprising Initiatives expands the definition of entrepreneurship beyond a primarily economic profit-seeking phenomenon to a broader understanding of enterprising behaviour based on an individual-opportunity nexus. Beyond social entrepreneurship, it explores a broad range of individual, collective and cooperative citizen initiatives under the umbrella of enterprising action. This innovative approach will be of great interest to scholars in entrepreneurship, social entrepreneurship, cultural entrepreneurship, cultural studies, and consumer culture, as well as for policy makers in public and local government, regional development and cultural event management.
