"Sony vs. Samsung is business history at its best! It explores the divergent fortunes of these two electronics giants in the last decade and identifies the true reasons behind Sony's decline and Samsung's rise. Contrary to popular belief, Chang shows that success (or failure) does not simply arise from different strategies. Rather, it emerges from major decisions that are deeply rooted in the companies' organizational processes and their executives' political behavior. This book is a must-read for any senior executive." —Constantinos Markides, Robert P. Bauman Professor of Strategic Leadership and Chairman, Strategy Department, London Business School "Sea-Jin Chang has produced that rarity in a business book--one that is as valuable to practicing managers as it is insightful to academic researchers. In this fascinating comparison of two modern global giants, he applies his high resolution research microscope to their changing fortunes by dissecting their contrasting strategies, and providing interesting insights into their divergent organizational processes and management practices. This is a very valuable contribution to the international business literature. It will end up in as many corporate boardrooms as faculty seminars." —Christopher A. Bartlett, Thomas D. Casserly Professor Emeritus, Harvard Business School "Sea-Jin Chang has written a fascinating comparison of Sony and Samsung that will be valuable to anyone interested in strategy, organizations or international business. The interwoven and very detailed case studies of two very different companies in overlapping

industries illuminate problems such as adaptation to technological change (analog to digital), organizational flexibility and globalization. His attempt to analyze both strategic development and implementation is successful and very useful. Both academics and practitioners will learn a lot from this book." —Stephen J. Kobrin, William Wurster Professor of Multinational Management, The Wharton School, University of Pennsylvania "Refreshingly original and entertaining, this book analyzes major strategic decisions of Samsung and Sony and highlights organizational processes and top management leadership that have shaped their performances. This is a must-read for all executives who want to understand the strengths and weaknesses of Asian competitors. It also provides penetrating insights to other Asian companies with global ambitions." —Myoung Woo Lee, President and CEO, iriver

While critics have long disparaged commercial television as a vast wasteland, TV has surprising links to the urbane world of modern art that stretch back to the 1950s and '60s During that era, the rapid rise of commercial television coincided with dynamic new movements in the visual arts—a potent combination that precipitated a major shift in the way Americans experienced the world visually. TV by Design uncovers this captivating story of how modernism and network television converged and intertwined in their mutual ascent during the decades of

the cold war. Whereas most histories of television focus on the way older forms of entertainment were recycled for the new medium, Lynn Spigel shows how TV was instrumental in introducing the public to the latest trends in art and design. Abstract expressionism, pop art, art cinema, modern architecture, and cutting-edge graphic design were all mined for staging techniques, scenic designs, and an ever-growing number of commercials. As a result, TV helped fuel the public craze for trendy modern products, such as tailfin cars and boomerang coffee tables, that was vital to the burgeoning postwar economy. And along with influencing the look of television, many artists—including Eero Saarinen, Ben Shahn, Saul Bass, William Golden, and Richard Avedon—also participated in its creation as the networks put them to work designing everything from their corporate headquarters to their company cufflinks. Dizzy Gillespie, Ernie Kovacs, Duke Ellington, and Andy Warhol all stop by in this imaginative and winning account of the ways in which art, television, and commerce merged in the first decades of the TV age.

Research on the influence of culture on consumer decision-making and consumption behavior has witnessed tremendous growth in the last decade. With increasing globalization, managers are becoming increasingly aware that operating in multiple markets is crucial for firms' survival and growth. As the world's growth engine shifts from Europe and North America to Asia and Latin America, it has become apparent that an inward-looking and domestic focus strategy will not be sustainable in the long run. And success in foreign markets requires marketers to understand not just what consumers in these markets need but also how they think, behave, consume, and purchase. Numerous studies have documented cultural differences in values and beliefs, motivational orientations, emotions, self-regulation, and information-processing styles, and the effects of these cultural variations on consumer behavior such as brand evaluation, materialism, and

impulsive consumption. In this volume, experts from a variety of disciplines and perspectives trace the historical development of culture research in consumer psychology and examine the theoretical underpinnings that account for these findings and the current state of the field. Collectively, the chapters provide a forum for researchers to engage in thoughtful debates and stimulating conversations and offer directions for future research.

Why the increasing use of boilerplate is eroding our rights Boilerplate—the fine-print terms and conditions that we become subject to when we click "I agree" online, rent an apartment, enter an employment contract, sign up for a cellphone carrier, or buy travel tickets—pervades all aspects of our modern lives. On a daily basis, most of us accept boilerplate provisions without realizing that should a dispute arise about a purchased good or service, the nonnegotiable boilerplate terms can deprive us of our right to jury trial and relieve providers of responsibility for harm. Boilerplate is the first comprehensive treatment of the problems posed by the increasing use of these terms, demonstrating how their use has degraded traditional notions of consent, agreement, and contract, and sacrificed core rights whose loss threatens the democratic order. Margaret Jane Radin examines attempts to justify the use of boilerplate provisions by claiming either that recipients freely consent to them or that economic efficiency demands them, and she finds these justifications wanting. She argues, moreover, that our courts, legislatures, and regulatory agencies have fallen short in their evaluation and oversight of the use of boilerplate clauses. To improve legal evaluation of boilerplate, Radin offers a new analytical framework, one that takes into account the nature of the rights affected, the quality of the recipient's consent, and the extent of the use of these terms. Radin goes on to offer possibilities for new methods of boilerplate evaluation and control, among them the bold suggestion that tort law rather than contract law provides a preferable analysis for some boilerplate schemes. She concludes by discussing positive steps that NGOs,

legislators, regulators, courts, and scholars could take to bring about better practices.

Transforming Type examines kinetic or moving type in a range of fields including film credits, television idents, interactive poetry and motion graphics. As the screen increasingly imitates the properties of real-life environments, typographic sequences are able to present letters that are active and reactive. These environments invite new discussions about the difference between motion and change, global and local transformation, and the relationship between word and image. In this illuminating study, Barbara Brownie explores the ways in which letterforms transform on screen, and the consequences of such transformations. Drawing on examples including Kyle Cooper's title sequence design, kinetic poetry and MPC's idents for the UK's Channel 4, she differentiates motion from other kinds

of kineticism, with particular emphasis on the transformation of letterforms into other forms and objects, through construction, parallax and metamorphosis. She proposes that each of these kinetic behaviours requires us to revisit existing assumptions about the nature of alphabetic forms and the spaces in which they are found.
