Airline's General Aviation

This is a comprehensive reference to every type and manufacturer of business and

light aircraft constructed in the Western World since World War II.

The Bulletin

Farm Implement and Machinery Review

This is a completely new and revised edition of the General Aviation Handbook, long overdue since it has been over 10 years since the last edition was published. This edition is fully revised and updated and contains 10 years worth of updated material, including the addition of a number of manufacturers and aircraft which were omitted from earlier editions for various reasons. Aircraft new to this edition include the so-called "heavy microlights", which are now an important part of the worldwide light aircraft scene. About 90 percent of the photos are new, and larger page size provides greater space for large data tables and photos. Previous editions have been strong sellers; this is the main reference book on this important sector of the aviation world, and this new edition will be welcomed by both aviation enthusiasts and those involved in the aviation industry.

Surveyor

Aircraft

Australia has some of the world's largest and most labor-efficient farms, and tractors are an essential part of their operations. The average Australian farm has three or more tractors. In this historical overview, the author documents the development of the indigenous tractor industry, from the McDonald Imperial of 1909 to more recent cane, olive, and grape harvesters. Australian Tractors puts the industry in an economic and social history context.

Motor

This is the fascinating story of how a former fitter-and-turner from Perth sold his radical two-cycle design to international engine makers. Ralph Sarich is now one of Australia's wealthiest and most controversial figures, having at last realized his impossible dream.

Networks of Design maps a new methodological territory in design studies, conceived as a field of interdisciplinary inquiry and practice informed by a range of responses to actor network theory. It brings together a rich body of current work by researchers in the social sciences, technology, material culture, cultural

geography, information technology, and systems design, and design theory and history. This collection will be invaluable to students and researchers in many areas of design studies and to design practitioners receptive to new and challenging notions of what constitutes the design process. Over ninety essays are thematically organised to address five aspects of the expanded notions of mediation, agency, and collaboration posited by network theory: Ideas, Things, Technology, Texts, and People. The collection also includes an important new essay on rethinking the concept of design by Bruno Latour, one of the most influential figures in the philosophy and sociology of science and technology and a pioneer of actor network theory, and essays deriving from forum discussions involving designers and designer-makers responsive to actor network theory. Rather than an anthology of previously-published essays, *Networks of Design* presents work in progress on design theory and its applications. It is the outcome of a live and vigorous debate on the possibilities and actualities offered by actor network led conceptualisations of the relationships and processes constituting design. All the essays, many collaborative, derive from papers presented at the international conference of the Design History Society held at University College Falmouth, UK in the Autumn of 2008.
